About Us

Technology and Business Solutions Ltd. (TBS) is a software solution provider established in 2005, providing **customized software application, quality assurance, testing and in-house products** to the domestic and international markets. Our journey started almost 20 years ago focusing on delivering solutions with the highest quality and standards, and our loyal clients throughout the years is a testimony to our legacy.

TBS collaborates closely with its clients to understand their unique requirements and provides personalized solutions to meet their specific needs. With many years of experience in the software development industry, TBS has established a solid reputation for delivering efficient and effective solutions to its clients.

Quality Assurance and Testing

Our objective is to help clients make their software products more **reliable, fault free and user-friendly**, making it more competitive in the market, resulting in INCREASED revenue and profits.

Our testing services can contribute in bringing software products faster to market, improve quality, and at the same time reduce cost by providing testing services during peak demand and resource constraints during the software development lifecycle.

Our company's team of skilled professionals utilizes the necessary technology, tools and techniques to develop and test software applications, websites, and other digital products, and for this we have a dedicated and qualified Quality Assurance, Testing and Management team that can ensure excellence, quality and sustainability.

Why Us

- ❖ **Over 19+ Years of Software Development and Testing Experience**
- ❖ **Multi-Disciplinary Domain Knowledge**
- ❖ **Personalized Customer Service and Maintenance Support**
- ❖ **Industry and International Standard**
- ❖ **Focus on Quality Assurance & Quality Control**
- ❖ **Experience in Public Sector and Private Sector**
- ❖ **International Outsourcing Experience**

Scope of Service

Functional Testing:	Ensure its front-end and back-end perform as designed, effortlessly, efficiently, consistently, and all features and functionality are fault free.
Integration Testing	Testing the interface between two software units or modules. The purpose of integration testing is to expose faults in the interaction between integrated units.
Compatibility Testing:	Make sure that the software will work seamlessly and flawlessly on the supported hardware, devices and third-party software utilities and tools.
Load Testing:	We push the software to its limits to confirm that it can endure the demands of increasing data, information and end-users for a growing business.
Performance Testing:	Testing process used for testing the speed, response time, stability, reliability, scalability, and resource usage of a software application under a particular workload.
Usability Testing:	Provide feedback and recommendations that the UI/UX is intuitive, user-friendly, visually appealing and aesthetic.
Regression Testing:	Retesting after each iteration of bug fixes and code changes, to validate the absence of errors and faults throughout the software application.
Security Testing:	Evaluating a system, application, or network to identify and address potential vulnerabilities and security weaknesses.

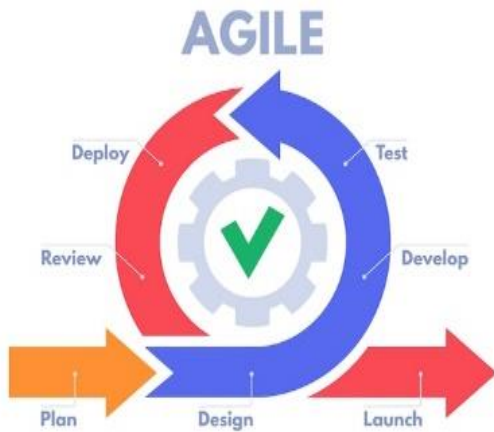

International Outsourcing

Indonesia:	PT Kalventis Sinergi Farma
USA:	Clarus LLC, Clarus Aero LLC
